Summary

Recent MCA graduate and aspiring Software Developer with a specialized focus on building practical, end-to-end AI applications. Proficient in the Python ecosystem, I am skilled in developing scalable backends using FastAPI and Flask, while integrating machine learning models built with TensorFlow and Keras. I enjoy the challenge of solving real-world problems through clean code, ranging from intelligent document-processing agents to responsive full-stack web applications.

My technical focus lies in bridging the gap between complex AI logic and user-centric interfaces. I have hands-on experience implementing Agentic RAG workflows and Vector Search (MongoDB Atlas) to improve data retrieval, alongside a solid understanding of training CNN architectures for high-accuracy image classification. I am eager to contribute my foundational technical skills and quick-to-learn mindset to a professional software development team.

Technical Skills

Languages: Python (Primary), JavaScript, SQL, C++.

AI/ML: TensorFlow, Keras, PyTorch, Scikit-learn, LangChain, LangGraph, RAG.

Web Development: FastAPI, Flask, React.js, Next.js, Tailwind CSS.

Databases: MySQL, MongoDB (Atlas Vector Search).

Tools: Git, GitHub, VS Code, Jupyter Notebook, Anaconda, Docker.

Projects

OmniScript Agent

Python, JavaScript, MongoDB, React.js, FastAPI, LangChain, LangGraph

- Built an Agentic RAG system enabling conversational interaction with complex PDF documents using LLMs.
- Engineered a LangGraph workflow with "Self-RAG" logic to evaluate retrieval relevance and self-correct AI responses.
- Implemented MongoDB Atlas Vector Search for high-dimensional embeddings, optimizing retrieval speed and semantic accuracy.
- Developed a FastAPI backend to manage asynchronous document processing and real-time streaming queries.
- Designed a React and Tailwind CSS front-end featuring secure file uploads and persistent user chat history.

Cancer Detection Using CNN

TensorFlow, OpenCV

- Developed a CNN model capable of classifying histopathology images for cancer detection with 92% accuracy.
- Implemented data preprocessing, augmentation, and normalization to improve model generalization.
- Evaluated performance using confusion matrices and ROC curves to ensure high diagnostic reliability.

AI App Maker

Next.js, CRUD operations, MongoDB

- Developed a full-stack application using Next.js to manage data through a clean, responsive user interface.
- Implemented comprehensive CRUD functionalities for seamless data management and real-time database synchronization.
- Designed the UI using Tailwind CSS to provide a modern, mobile-friendly experience for end-users.

Education

Master of Computer Applications (MCA)

Chandigarh University

Punjab, India

- **Relevant Coursework:** Analysis of Algorithms, Database Management Systems, Operating Systems, Computer Networking.

Bachelor of Computer Science (BSc)

Guwahati University

Assam, India

- **Relevant Coursework:** Object Oriented Programming (OOPS), Data Structures, Software Engineering.

Certifications

- **Angular** - Infosys Certification
- **JavaScript** - Infosys Certification
- **React Native** - Infosys Certification
